

Embroidery on Velvet

Rich, luxurious velvet can be a lovely match for embroidery! Read on to discover tips and tricks to make your stitching look beautiful -- and avoid crushing this delicate fabric.

Products Used

Baroque Butterfly (Embossed) (Sku: ESP12478-1)

Steps To Complete

A collection of craft supplies is arranged on a dark, textured surface. In the foreground, a pair of scissors with yellow and blue handles and a purple pivot point lies diagonally. To its left is a spool of purple thread on a white stand, and a small clear box filled with red pins. Behind the scissors is a circular piece of white paper with a detailed black and grey floral or mandala pattern. To the right of the scissors is a yellow glue stick with a white label that reads 'GUNOLD' and 'KK 100'. Behind the glue stick are two rolls of white paper or fabric. The entire scene is set against a dark, possibly black, background.

Baroque Butterfly (Embossed)

Velvet fabric

Temporary spray adhesive

Water-soluble stabilizer for topping

Scissors

Pins

Start by positioning the printed template in the area intended for embroidery. Poke a hole in the center to mark the center of the design. Mark the horizontal and vertical axis lines and remove the template.

After the embroidery design has been loaded and the appropriate hoop has been selected,, apply a generous amount of temporary spray adhesive to the stabilizer and hoop it (sticky side up). Make sure the stabilizer is taut and that the hoop screw is as tight as possible.

Smooth the velvet on top of the hooped stabilizer, lining up the axis lines with the marks on the hoop.

Lay a piece of lightweight water-soluble stabilizer over the velvet as a topping (this will help keep the stitches from sinking down into the nap), and pin all three layers (stabilizer, velvet and topping) together. Place the pins as close to the edge of the hoop as possible.

Attach the hoop to the embroidery machine, and stitch the design.

Once the embroidery design has completed sewing, trim loose threads and remove the excess cutaway stabilizer from the back.

Remove the water-soluble stabilizer from the front.

If any small bits of water-soluble stabilizer remain, use tweezers to remove them or simply wet your fingertips and gently brush the stabilizer away.

Note: Crushed velvet and polyester velvets are usually fine to hand-wash or machine wash; the gentle cycle is recommended.
